

ABOUT USAHIHI

The Usahihi Nairobi to Mombasa Expressway is a 440 km long climate-sensitive wealth corridor, fostering self-reliance and prosperity among Kenyans by creating thousands of direct jobs and time and cost benefits for its users.

Usahihi means “Done Correctly” in Swahili, and envisions a transformative symbol showcasing Kenya’s dedication to transparent, ethical, and innovative infrastructure development.

MISSION

to construct the Usahihi expressway as a pioneering example of transparent, sustainable, and community-focused infrastructure, fostering economic growth, environmental protection, and global inspiration for ethical development without financial burden to Kenyan citizens.

MORE INFO

Everstrong Capital is a US-owned infrastructure investment manager with a presence in both the US and Kenya.

Everstrong’s proficient team is leading a like-minded consortium of some of the world’s first-class engineering, contractors, legal, environmental, and financial experts with decades of experience in building, operating, and maintaining expressways and strategically planned real estate developments.

USAHIHI

THE NEW WAY

POWERED BY

SOCIAL & ECONOMIC IMPACT

The Usahihi expressway promises substantial time and cost benefits for its users by bringing the current 10.5-hour journey between Nairobi and Mombasa, known as one of Africa's most dangerous routes for both people and wildlife, down to a safe journey of approximately 4.5 hours. It will feature rest stops, wildlife observation points, electric vehicle charging infrastructure powered by renewable energy sources, and strategically located overpasses designed by environmental experts based on animal migration patterns to facilitate safe wildlife migration.

With planned communities and industrial zones, the Usahihi NME Expressway is expected to generate hundreds of thousands of jobs. The TVET training program offers technical training to communities in every county along its route and contributes to skill development, enterprise growth, and economic expansion.

Serving as the inaugural segment of the Northern Economic Corridor, the Usahihi Expressway links Uganda, Rwanda, and the Democratic Republic of Congo to Mombasa. By facilitating the secure, efficient, and comfortable movement of people and goods throughout the East African region, the Usahihi expressway will establish an economic bridge fostering connectivity and enhancing economic opportunities.

KEY ELEMENTS

-  440 km of 4-6 Lane dual carriageway highway
-  Reduced travel time from 10.5 to 4.5 hours
-  Improved safety for people and wildlife
-  Convenient access to master-planned communities
-  2 Wildlife Lookouts

FINANCING

The Usahihi expressway, structured as a Public Private Partnership (PPP) under the PPP Act, carries no financial risks for the Kenyan government and its citizens. It's designed to be financially self-sustaining, attracting USD 3.6 billion in investments from international and domestic private investors and pension funds. The project oversees financing, construction, tolling, operation, and maintenance for a 30-year concession period, including a construction time of 3-4 years.
